Abu Shaikh Nibir

01733488067 | abushaikhnibir@gmail.com | https://github.com/asnibir | https://www.linkedin.com/in/abu-shaikh-nibir/

Education

University of Dhaka *Dhaka, Bangladesh*

BSc in Computer Science and Engineering *January 2018 - December 2022*

- CGPA : 3.48

Skills

Programming Lanuages	C, C++, Python, JavaScript, TypeScript, Java
Frameworks & Tools	Angular, HTML/CSS, Git, Bold Reports, Postman
Research & Documentation	TensorFlow, LaTeX(Overleaf)
Soft Skills	Teamwork, Problem Solving, Communication

Work Experience

Dohatec New Media *Dhaka, Bangladesh*

Software Engineer (Frontend) *March 2023 - Current*

- Contributing to the development of the National e-Project Management Information System (e-PMIS) — a centralized platform for managing project data, progress, and reports across government agencies.
- Developing and maintaining dynamic, responsive frontend modules using Angular, TypeScript, HTML/CSS, and PrimeNG.
- Implementing state management using NgRx Store for scalable and efficient data handling across complex application modules.
- Integrating RESTful APIs to synchronize data with backend microservices, ensuring real-time updates and a smooth user experience.
- Designing and generating interactive financial and physical progress reports using Bold Reports, enhancing data visibility for decision-makers.
- Collaborating with cross-functional teams to implement new features, fix bugs, and optimize performance across modules.
- **Key Technologies:** Angular, TypeScript, HTML/CSS, NgRx, Bold Reports, REST API, PrimeNG, Git

Rafiul Hassan, Mohammad Mehedi Hassan, "Weighted fair energy transfer in a UAV network: A multi-agent deep reinforcement learning approach," *Energy*, Elsevier, vol. 293, p. 130398, 2024. https://doi.org/10.1016/j.energy.2024.130398

Research and Academic Projects

Efficient Wireless Power Transfer in a UAV Network: A Multi-Agent Deep Reinforcement Learning Approach

4th-Year Research Project *2022*

- Developed a deep reinforcement learning-based framework to optimize wireless power transfer among UAVs, ensuring both efficiency and fairness.
- This work was later published in *Energy* (Elsevier), vol. 293, p. 130398, 2024. https://doi.org/10.1016/j.energy.2024.130398

Anweshon

Software Engineering Course Project *2020–2021*

Anweshon is a web application that allows customers to search for a product and view similar items from multiple online stores. It aggregates and compares detailed information across different platforms to help users make informed purchase decisions.

Key Technologies: Python, JavaScript, HTML/CSS, SQLite

GitHub: https://github.com/asnibir/Anweshon

Jarvis (Personal Assistant App)

Android Application *2019*

Jarvis is a comprehensive personal assistant application to enhance daily productivity and organization.

The application's core features include **To Do**, **Wallet**, **Journal**, and **Reminder**, all enhanced by an integrated voice command feature.

Key technologies: Java, Android SDK, Firebase, SQLite.

Github Link: https://github.com/smmehrab/Jarvis
